During the New Year holidays, Uzbekistan Airways provides its passengers with the opportunity to stay in touch with their friends and family members at a better price: all types of Internet packages available on board the aircraft have a 45% discount.

Earlier, equipment for accessing the Internet was installed on the Airbus A320neo and Boeing 787 Dreamliner airlines, after which several Internet packages of various sizes have become available to passengers:

LITE package (20 MB) is recommended for passengers who want to use various instant messengers.

The MEDIUM package (50 MB) is intended for lovers of social networks or visiting multiple websites.

STREAM package (120 MB) can be used by passengers who want to make easy Internet surfing.

BUSINESS (220 MB) is a maximum volume package that combines the capabilities of all packages.

You can purchase these Internet packages both on the airline’s official website one day before the flight departure and/or on board the aircraft during the flight.
